Absolute configuration in stereochemistry is the arrangement of atoms or group of atoms that is described independently of any other atom or group of atoms in the molecule. This type of configuration is defined for chiral molecular entities and their stereochemical descriptions (e.g. R or

## ~~Difference Between Absolute and Relative Configuration in ...~~

An absolute configuration refers to the spatial arrangement of the atoms of a chiral molecular entity and its

Absolute configurations for a chiral molecule are most often obtained by X-ray crystallography. All enantiomerically pure chiral molecules crystallise in one of the 65 Sohncke groups. Alternative techniques are optical
