to mass starvation. Since the area was too remote for hunters, the wildlife service decided to bring in natural predators to control the deer population. It was hoped that natural predation would keep the deer population from becoming too large and also increase the deer quality (or health), as predators often eliminate the weaker members of the herd. In 1971,

Deer: Predation or Starvation

Calculate the number of deaths (predation + starvation). To determine the deer population change, subtract the number of deaths from births (births - deaths), this can be a positive number, indicating growth, or a negative number which indicates a population decline. Calculate the deer population by adding/subtracting the population change from the population the year before

Deer: Predation or Starvation

feared that overgrazing might lead to mass starvation. Since the area was too remote for hunters, the wildlife service decided to bring in natural predators to control the deer population. It was hoped that natural predation would keep the deer population from becoming too large and also increase the deer quality (or

Lab: Predation or Starvation - Triton Science

Deer: Predation or Starvation \*This lab was modified from an activity at biologycorner.com. Credit is given for this original idea to this site. Introduction: In 1970 the deer population of an island forest reserve about 518 square kilometers in size was about 2000 animals.

Name: \_\_\_\_\_ Date Completed

Population Dynamics - Deer Predation or Starvation In 1970 the deer population of an island forest reserve about 518 square kilometers in size was about 2000 animals. Although the island had excellent vegetation for feeding, the food supply obviously had limits. Thus, the forest management personnel feared that overgrazing might lead to mass starvation.

3. LAB Population Dynamics - Deer Predation or Starvation

Since the area was too remote for hunters, the wildlife service decided to bring in natural predators to control the deer population. It was hoped that natural predation would keep the deer population from becoming too large and also increase the deer quality (or health), as predators often eliminate the weaker members of the herd. In 1971, ten wolves were flown into the island.

Deer Predation or Starvation.doc - Name Date Completed ...

Part 3: Deer - Predation or Starvation. Introduction: In 1970 the deer population of an island forest reserve, about 518 square kilometers in size, was about 2000 animals. Although the island had excellent vegetation for feeding, the food supply obviously had limits. Thus the forest management personnel feared that overgrazing might lead to mass starvation.

Deer: Predation or Starvation

Since the area was too remote for hunters, the wildlife service decided to bring in natural predators to control the deer population. It was hoped that natural predation would keep the deer population from becoming too large and also increase the deer quality (or health), as predators often eliminate the weaker members of the herd.

Deer: Predation or Starvation Key

Deer: Predation or Starvation Introduction: An island population of deer has no predators and the island is too remote for hunters. Is it better to let nature take its course with the deer population or should predators (wolves) be introduced onto the island? This activity could be done before or after playing WolfQuest. • National Science
