Line Graph is plotted using plot function in the R language. The line graph can be

associated with meaningful labels and titles using the function parameters. The line graphs can be colored using the color parameter to signify the multi-line graphs for better graph representation. The line graphs in R are useful for time-series data analysis. Fig 1.

First, download the file and load it into your favorite text editor. Replace `ss+` with `t` to create two tab delimited columns. I think this is probably easier than trying to get R to read data separated by at least 2 spaces, as the source file seems to be. Now, load your data into R.

Data Visualisation is a vital tool that can unearth possible crucial insights from data. If the results of an analysis are not visualised properly, it will not be communicated effectively to the desired audience. In this tutorial, we will learn how to analyze and display data using R statistical language.

These points are ordered in one of their coordinate (usually the x-coordinate) value. Line charts are usually used in identifying the trends in data. The plot() function in R is used to create the line graph. Syntax. The basic syntax to create a line chart in R is `plot(v,type,col,xlab,ylab)`

data with circles and uses the variable names for the axis labels. The plot command accepts many arguments to change the look of the graph. Here, we use `type="l"` to plot a line rather than symbols, change the color to green, make the line width be 5, specify different labels for the  $x$  and  $y$  axis, and add a title (with the main argument).

The most commonly used graphs in the R language are scattered plots, box plots, line graphs, pie charts, histograms, and bar charts. R graphs support both two dimensional and three-dimensional plots for exploratory data analysis. There are R function like `plot()`, `barplot()`, `pie()` are used to develop graphs in R language. R package like `ggplot2` supports advance graphs functionalities. Types of Graphs in R. A variety of graphs is available in R, and the use is solely governed by the
