A small drop of a solution of the mixture is placed on the base line of the paper, and similar small spots of the known amino acids are placed alongside it. The paper is then stood in a suitable solvent and left to develop as before. In the diagram, the mixture is M, and the known amino acids are labelled 1 to 5.

Paper chromatography - Principle, procedure, Applications ...

Paper chromatography uses capillary force that move water or another solvent and the sample up the paper strip. The most soluble compounds of the sample will go farther the less soluble will stay at the start line. Using chromatography we can find out how many components are in paint, inks, markers as well as in natural dyes, leaf extracts.
