The role of government in East Asian economic development has been a continuous issue. Two competing views have shaped enquiries into the source of the rapid growth high-performing Asian economies and attempts to derive a general lesson for other developing economies: the market-friendly view, according to which government intervenes little in the market, and the developmental state view, in which it governs the market. What these views share in common is a conception of market and government as alternative mechanisms for resource allocation. They are distinct only in their judgement of the extent to which market failures have been, and ought to be, remedied by direct government intervention. This collection of essays suggests a breakthrough, third view: the market-enhancing view. Instead of viewing government and the market as mutually exclusive substitutes, it examines the capacity of government policy to facilitate or complement private sector co-ordination. The book starts from the premise that private sector institutions have important comparative advantages over government, in particular in their ability to process information available on site. At the same time, it recognizes that the capabilities of the private sector are more limited in developing economies. The market-enhancing view thus stresses the mechanisms whereby government policy is directed at improving the ability of the private sector to solve co-ordination problems and overcome other market imperfections. In presenting the market-enhancing view, the book recognizes the wide diversity of the roles of government across various East Asian economies-including Japan, Korea, Hong Kong, Malaysia, and China-and its path-dependant and developmental stage nature.

Wenkai He shows why England and Japan, facing crises in public finance, developed the tools and institutions of a modern fiscal state, while China, facing similar circumstances, did not. He's explanation for China's failure at a critical moment illuminates one of the most important but least understood transformations of the modern world.

This open access volume identifies the common and specific aspects of social mechanisms that generate inequalities, through comparative analyses of different dimensions in which inequalities are expressed. It includes studies on social inequalities in 5 European and 5 Latin American countries, along 11 thematic axes: inequalities in the labour market and labour trajectories; asymmetries in the relationship between training and employment; inequalities in work and family life; educational inequalities; geographical and social inequalities: ethnicity and language; social inequalities, migration and space; uncertainty, strategies, resources and capabilities; inequality of opportunity: intergenerational social mobility; social policies; gender inequalities; and research methodology. This volume is the result of a large collaborative project on social inequality funded by the European Commission: the International Network for Comparative Analysis of Social Inequalities. Taking into account diverse perspectives and approximations, the collaborators have created a general analytical framework as a model of analysis of social inequalities. The various contributions in this volume help readers gain a global outlook and help reflect on social inequalities in a comparative perspective. This volume addresses social science graduate and postgraduate students, researchers, social policy makers, as well as a broader academic audience interested in social inequality.

What kind of policy analysis is required now that governments increasingly encounter the limits of governing? Exploring the new contexts of politics and policy making, this book presents an original analysis of the relationship between state and society, and new possibilities for collective learning and conflict resolution. The key insight of the book is that democratic governance calls for a new deliberatively-oriented policy analysis. Traditionally policy analysis has been state-centered, based on the assumption that central government is self-evidently the locus of governing. Drawing on detailed empirical examples, the book examines the influence of developments such as increasing ethnic and cultural diversity, the complexity of socio-technical systems, and the impact of transnational arrangements on national policy making. This contextual approach indicates the need to rethink the relationship between social theory, policy analysis, and politics. The book is essential reading for all those involved in the study of public policy.

This publication examines issues of water sector reform and performance from the perspectives of institutional economics and political economic studies. The authors develop an alternative quantitative assessment methodology based on the principle of 'institutional ecology', as well as data collected from 127 water experts from 43 countries and regions around the world using a cross-country review of recent water sector reforms within an institutional transaction cost framework.
